

Digital bevaring med Archivematica

Arne-Kristian Groven,
Riksarkivet

arngro@arkivverket.no

KDRS-samling, Trondheim, 8.juni 2016

Litt om hva Archivematica er...

BAKGRUNN

Archivematica...

- Er et digitalt bevaringssystem, basert på dagens beste praksis og «state of art» standarder
- DC (Dublin Core), METS, PREMIS, Bagit og OAIS
- Tilbyr en (veldokumentert) OAIS-arbeidsflyt med manuelle eller automatiserte sjekkpunkter, via et web-basert grensesnitt («dashboard»)
- Tar imot mapper med filer som input, uten krav til filformatene. Konvertering av filformater skjer automatisert og regelstyrt ved generering av visningspakker (DIPer) og arkivpakker (AIPer)

Archivematica

- Tilbyr avanserte søk via verktøyets web-basert grensesnitt («dashboard»), hvor hele pakker (AIPer) kan lastes ned, eller (AIC) samlinger av AIPer, eller digitale objekter inneholdt i AIPer.
- Tilbyr integrasjon mot ulike depot- og aksess-systemer: AtoM, DSpace, CONTENTdm, Islandora, LOCKSS, DuraCloud, Arkivum, OpenStack and Archivists' Toolkit
- Eller, i sin enkleste form, så lagres pakkene i dedikerte fil- og mappestrukturer.

Fri programvare

- Fri programvare / åpen kildekode, under AGPLv3 (GNU Affero General Public License)
- Programkoden (kildekoden) er fritt tilgjengelig for enhver
- Dokumentasjonen likeså, under en Creative Commons Share-alike (del-på-samme vilkår) lisens
- Enhver kan studere, kvalitetssikre, tilpasse og distribuere ut fra spillereglene disse lisensene gir.

Leverandør og forretningsmodell

- Artifactual Systems, fra Canada, har utviklet og er hovedansvarlige for vedlikehold og videreutvikling av programvaren.
- De har kontroll over kodebasen, men andre (organisasjoner, fortrinnsvis) kan spille inn endringsønsker og bidra med finansiering for å få realisert sine ønsker (dersom disse aksepteres).

Eksempel fra versjon 1.4

Archivematica 1.4

Released May 27, 2015

This release improves and facilitates integration with a number of access/deposit systems, including CONTENTdm, Islandora and DSpace, as well as bug fixes and other small usability improvements.

New features

- Sponsored (University of Saskatchewan Library) Fedora/Islandora Integration
- Sponsored (GE Aviation) Bag ingest improvements ([#8309](#), PR191)
- Sponsored (University of British Columbia Library) DSpace Ingest improvements ([#6273](#), [#5889](#), PR154)
- Sponsored (University of British Columbia) CONTENTdm dip upload enhancements ([#8039](#), PR148)
- Transfer/SIP Creation feedback ([#7853](#), PR171)
- SIP Arrange enhancements (improved transfer METS) ([#7714](#), PR145)
- Review/Download DIP objects (See CONTENTdm DIP upload enhancements, [#8039](#))
- Processing location cleanup via dashboard ([#7921](#), PR199)
- Improved logging (backend only, no user-facing functionality) ([#6847](#), PR34, PR201)
- Sponsored (Columbia University) Extract Packages Recursively ([#8438](#), PR164)

Bug fixes

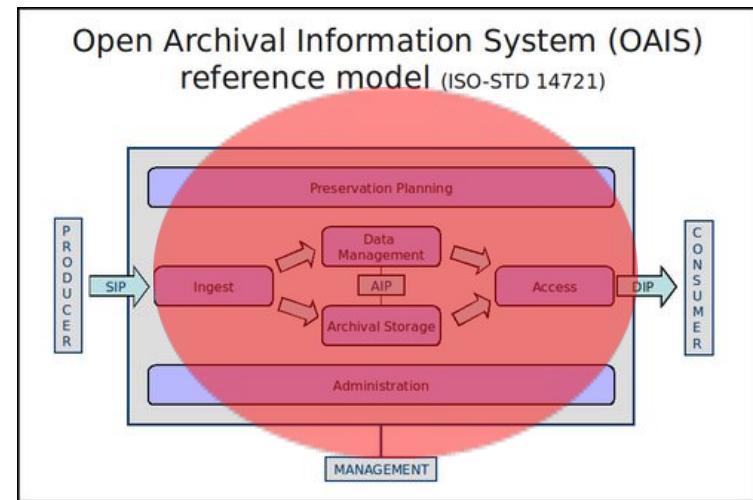

- Manual normalization fixes ([#6870](#), PR97, PR186)
- Improvements to metadata.csv handling ([#7901](#), [#8007](#), PR210)
- Accession ID's now working ([#7442](#), PR175, PR134)
- Sanitize Transfer Names ([#7937](#), PR170)
- Fix Remove Transfer Components ([#7482](#), PR172)
- Timestamps not updating fix ([#7859](#), PR162)
- Remove events for sanitize directory names ([#8033](#), PR177)
- AIC fixes ([#8258](#), [#7155](#), PR194, PR168)
- Verify checksum fail causes SIP failure ([#8225](#), PR190)
- Various Archival Storage search fixes (PR213, PR215, PR216, PR217, PR221, PR222, PR223)
- DIP Store location preconfiguration ([#7321](#), PR209)

New and upgraded tools

- Elasticsearch Updated to version 1.3
- FITS Updated to version 0.8.4
- FFMPEG Updated to version 2.6
- Automation tools: DSpace fixes (AT PR 2)
- New Support for Siegfried 1.0 for file identification (PR202)

Archivematica realiserer arbeidsprosessene i OAIS standarden

Arbeidsflyt

- Et sentralt begrep i Archivematica
- Grad av automatisering kan forhåndsdefineres (via konfigurasjonsfiler), for ulike use case
- Eller valg kan gjøres underveis, via brukerens interaksjon med GUI-et
- Er hvert steg dokumenteres, logges, samtidig som METS og PREMIS filer bygges opp underveis
- Unike identifikatorer genereres også, noe som muliggjør større søkeflater
- Feilsituasjoner blir synliggjort umiddelbart, via fargeforandringer i GUI-et og feillogger.

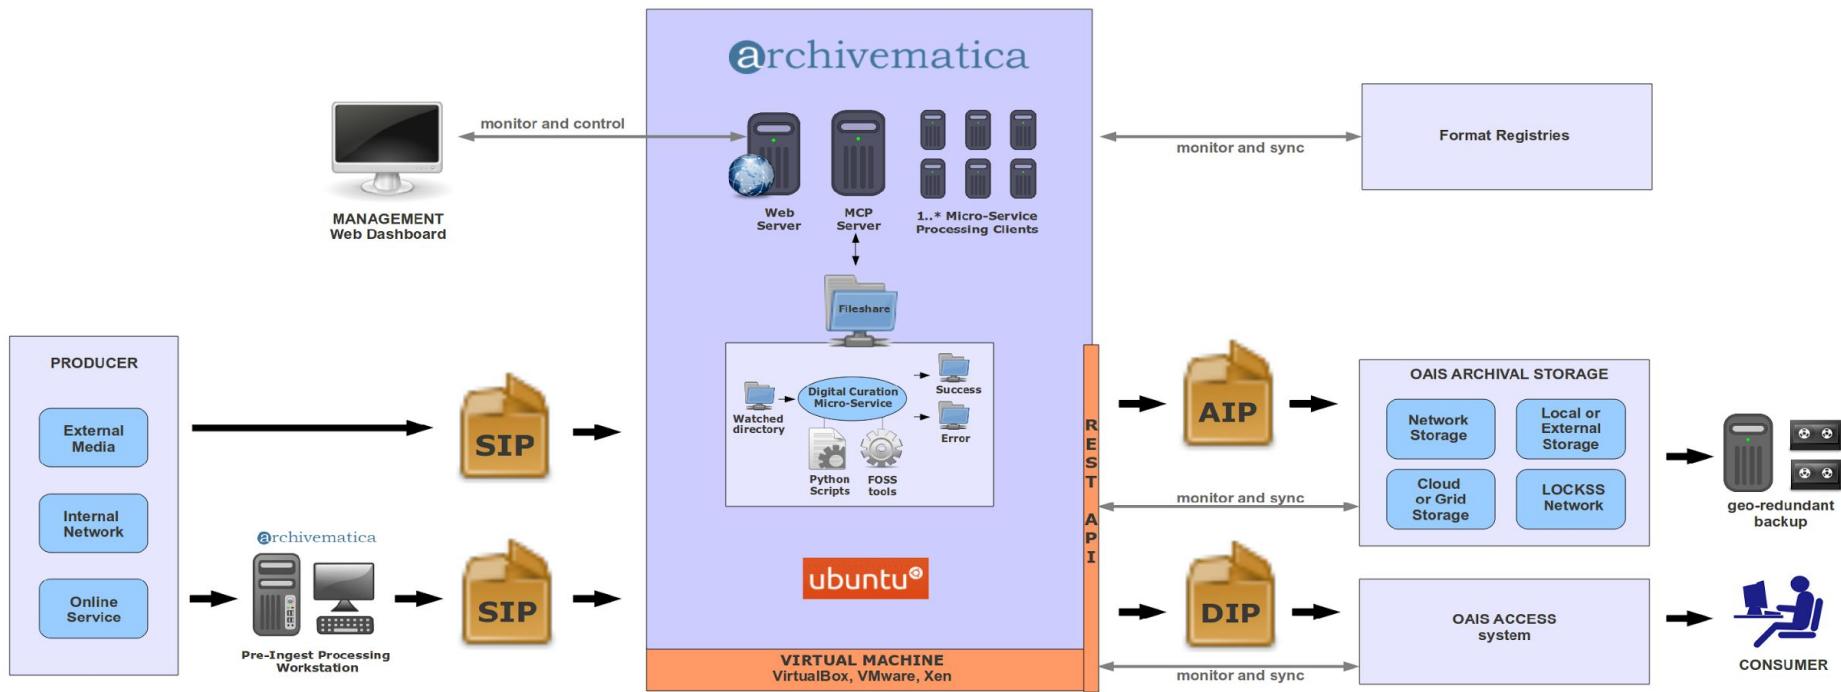

Et lite utsnitt av arbeidsflyten som gjennomføres i Archivematica

Litt om...

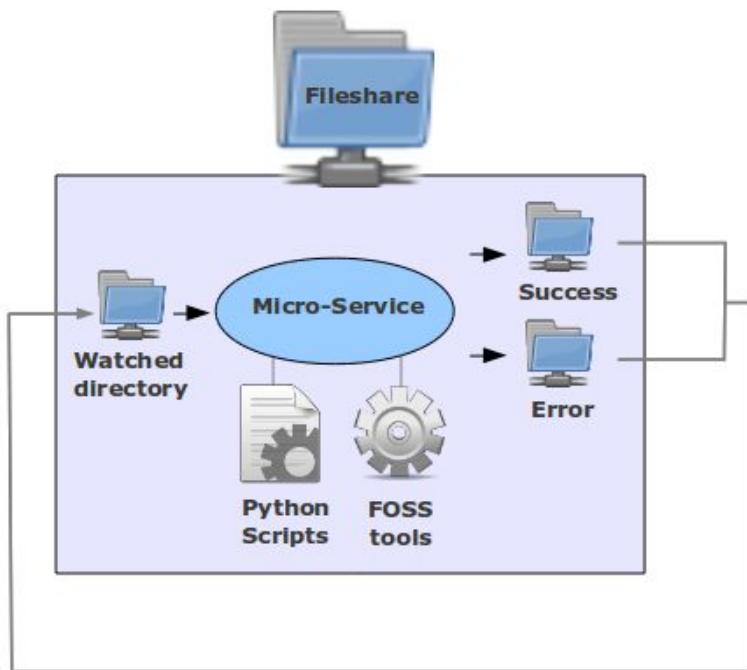

TEKNOLOGI

Det store bildet...

Kilde: <https://www.archivematica.org/wiki/File:Archivematica-0.8-beta-architecture.png>

Mikrotjeneste (MCP) -arkitekturen

- En mikrotjeneste utfører et steg i OAIS arbeidsflyten
- Mikrotjenester bearbeider informasjonspakker (IP-er), SIP-er/AIP-er/DIP-er
- IP-er inneholder filer, sjekksummer, logger, XML-metadata
- En mikrotjeneste er enten et Archivematica Python skript eller (ekstern) fri programvare

Fri programvare som benyttes

Release 1.4.1

Main Page > External software tools > Release 1.4.1

Archivematica integrates a suite of free and open-source tools that allows users to process digital objects from ingest to access in compliance with the ISO-OAIS functional model. In addition to the core Archivematica which is released under AGPL v3 license, the following tools are bundled with Archivematica.

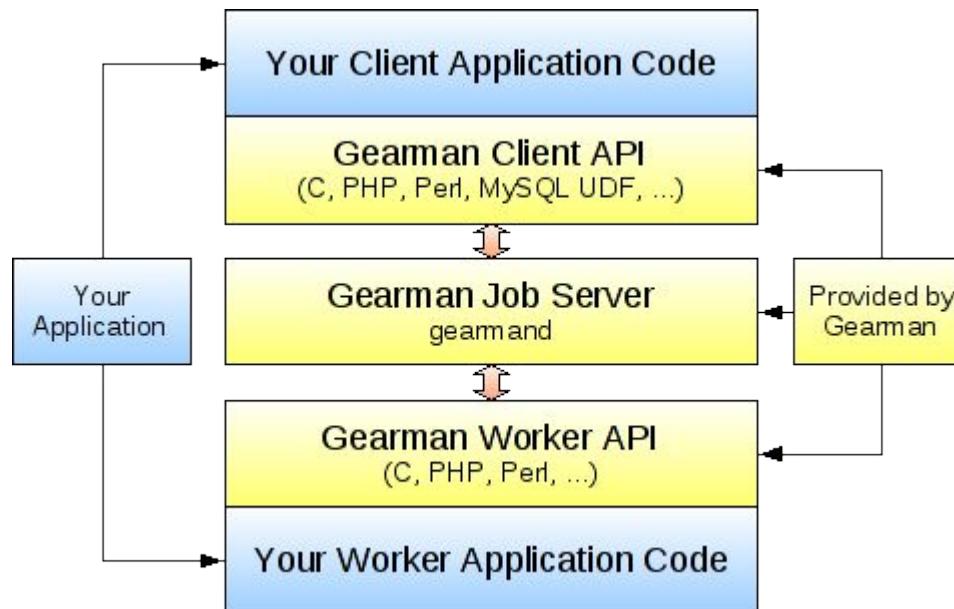

Tool	Description	License
BagIt 🔗	Standard and script to package digital objects and metadata for archival storage	BSD License
bulk_extractor 🔗	Disk image and file contents analysis tool	Public domain
[http://www.clamav.net/] Clam AV (anti-virus)	Anti-virus toolkit for UNIX	GNU General Public License (GPL)
ElasticSearch 🔗	Indexing and search	Apache License 2.0
ExifTool 🔗	Multimedia metadata extraction	GNU General Public License and Artistic License
FFmpeg 🔗	Converts a wide variety of audio and video formats	GNU Lesser General Public License (LGPL)
File Information Tool Set (FITS) 🔗	File format identification and validation software integration tool	GNU Lesser General Public License (LGPL)
fido 🔗	File format identification tool	Licensed under the Apache License, Version 2.0 (the "License")
Seigfried 🔗	File format identification tool	Licensed under the Apache License, Version 2.0 (the "License")
JHOVE 🔗	File format validation tool	GNU Lesser General Public License (LGPL)
MediaInfo 🔗	Multimedia metadata extraction	BSD (2-clause), Zlib
Tesseract 🔗	Optical Character Recognition -read image files and convert to text	Apache Licence Vesion 2
AtoM 🔗	Web-based archival description and access tool.	GNU General Public License (GPL)
ImageMagick 🔗	Converts a wide variety of bitmap images	GPL compatible ImageMagick license 🔗
Inkscape 🔗	Converts vector images to Scalable Vector Graphic (SVG) format	GNU General Public License (GPL) version 2
NFS-common 🔗	Network File System Access - allows access to files on network storage devices.	GNU General Public License (GPL)
Python-lxml 🔗	Python binding for libxml2 and libxslt	GNU General Public License (GPL)
The Sleuthkit 🔗	Disk image management and extraction toolkit	Common Public License / IBM Public License
md5deep 🔗	Checksum generation and verification scripts	GNU General Public License (GPL)
UUID 🔗	command line interface (CLI) for the generation of DCE 1.1, ISO/IEC 11578:1996 and IETF RFC-4122 compliant Universally Unique Identifier (UUID).	GNU General Public License (GPL)
Ubuntu Linux 🔗	Interface with computing hardware. Ubuntu Linux server edition.	GNU General Public License (GPL)

Mikrotjenester

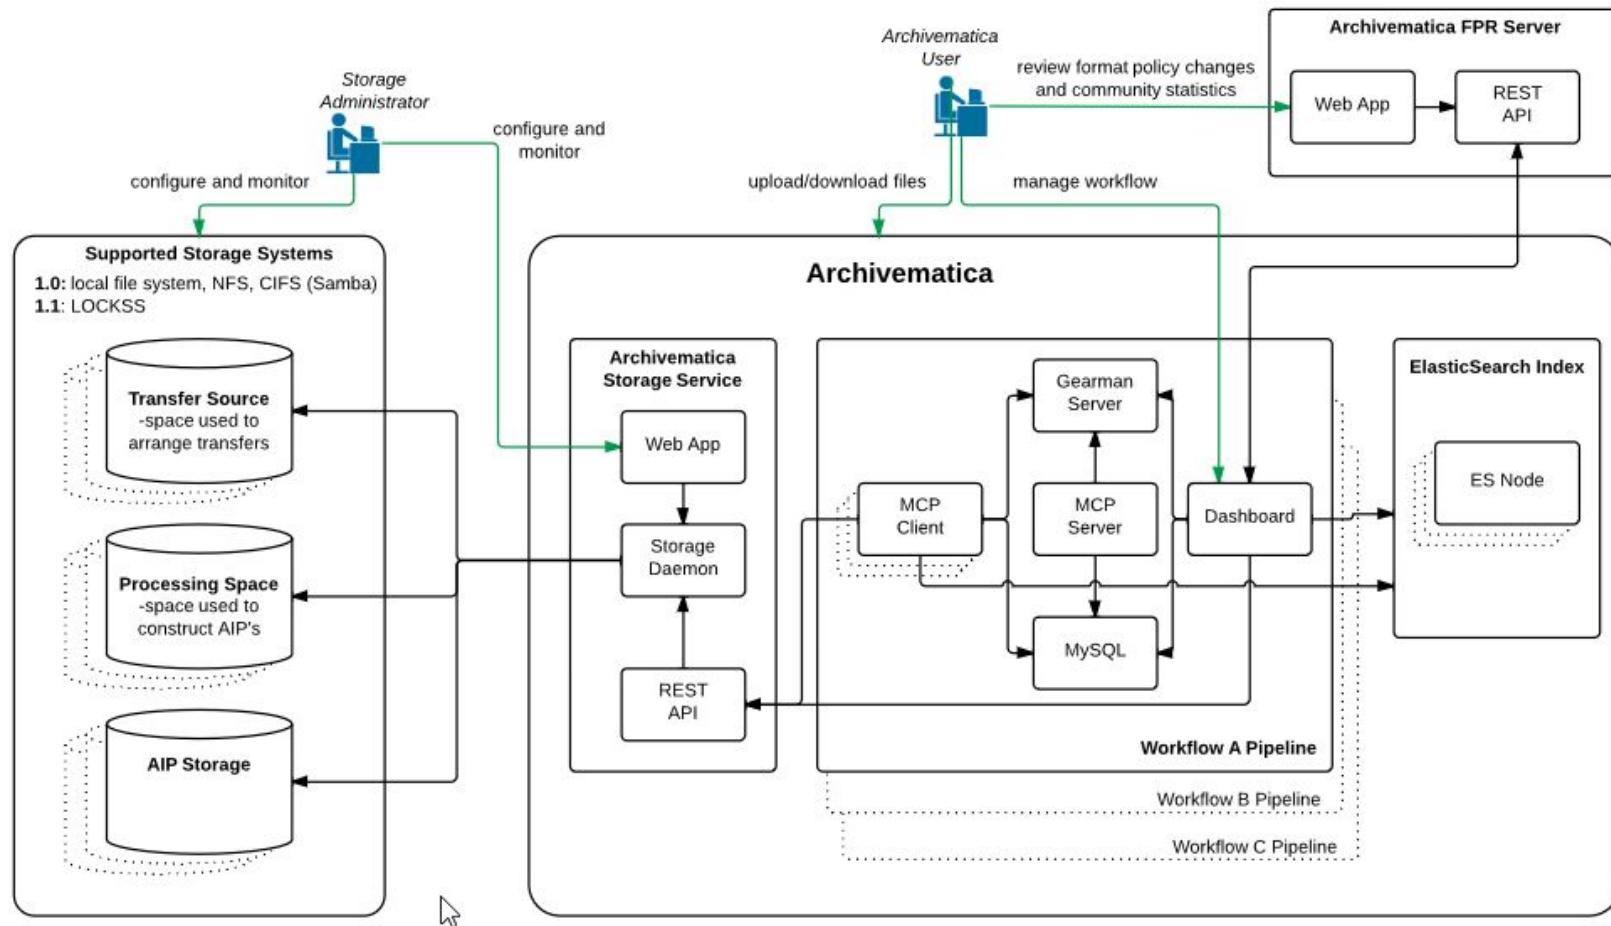

Ingest

Micro-service	Description
Approve SIP creation Approve SIP creation Create removal from backlog PREMIS events	[Collapse] Applies to SIPs that have been created from backlog. Approves creation of SIP, and creates PREMIS event for removal from backlog.
Verify transfer compliance	[Expand] Verifies the METS from the transfer.
Verify SIP compliance Set file permissions Move to processing directory Verify SIP compliance	[Collapse] Verifies that the SIP conforms to the folder structure required for processing in Archivematica. The structure is as follows: ./logs/, ./metadata/, ./metadata /submissionDocumentation/, ./objects/.
Rename SIP directory with SIP UUID Rename SIP directory with SIP UUID Check if SIP is from Maildir Transfer	[Collapse] Directly associates the SIP with its metadata by appending the SIP UUID to the SIP directory name and checks if SIP is from Maildir transfer type to determine workflow.
Include default SIP processingMCP.xml	[Expand] Copies the processing configuration file added to the transfer in Include default Transfer processingMCP.xml , above, to the SIP.
Remove cache files	[Expand] Removes any thumbs.db files.
Clean up names	[Expand] Some file systems do not support unicode or other special characters in filenames. This micro-service removes prohibited characters and replaces them with dashes. Original filenames are preserved in the PREMIS metadata.
Normalize Identify manually normalized files Check for Service directory Check for Access directory Set remove preservation and access normalized files to renormalize link. Create normalization actions for no pre-existing DIP	[Collapse] ■ ■ ■ ■ ■

I bunnen av mikrotjeneste-arkitekturen ligger Gearman

ERFARINGER FRA PROSJEKTET VI KJØRER I SAMDOK-PROSJEKTET

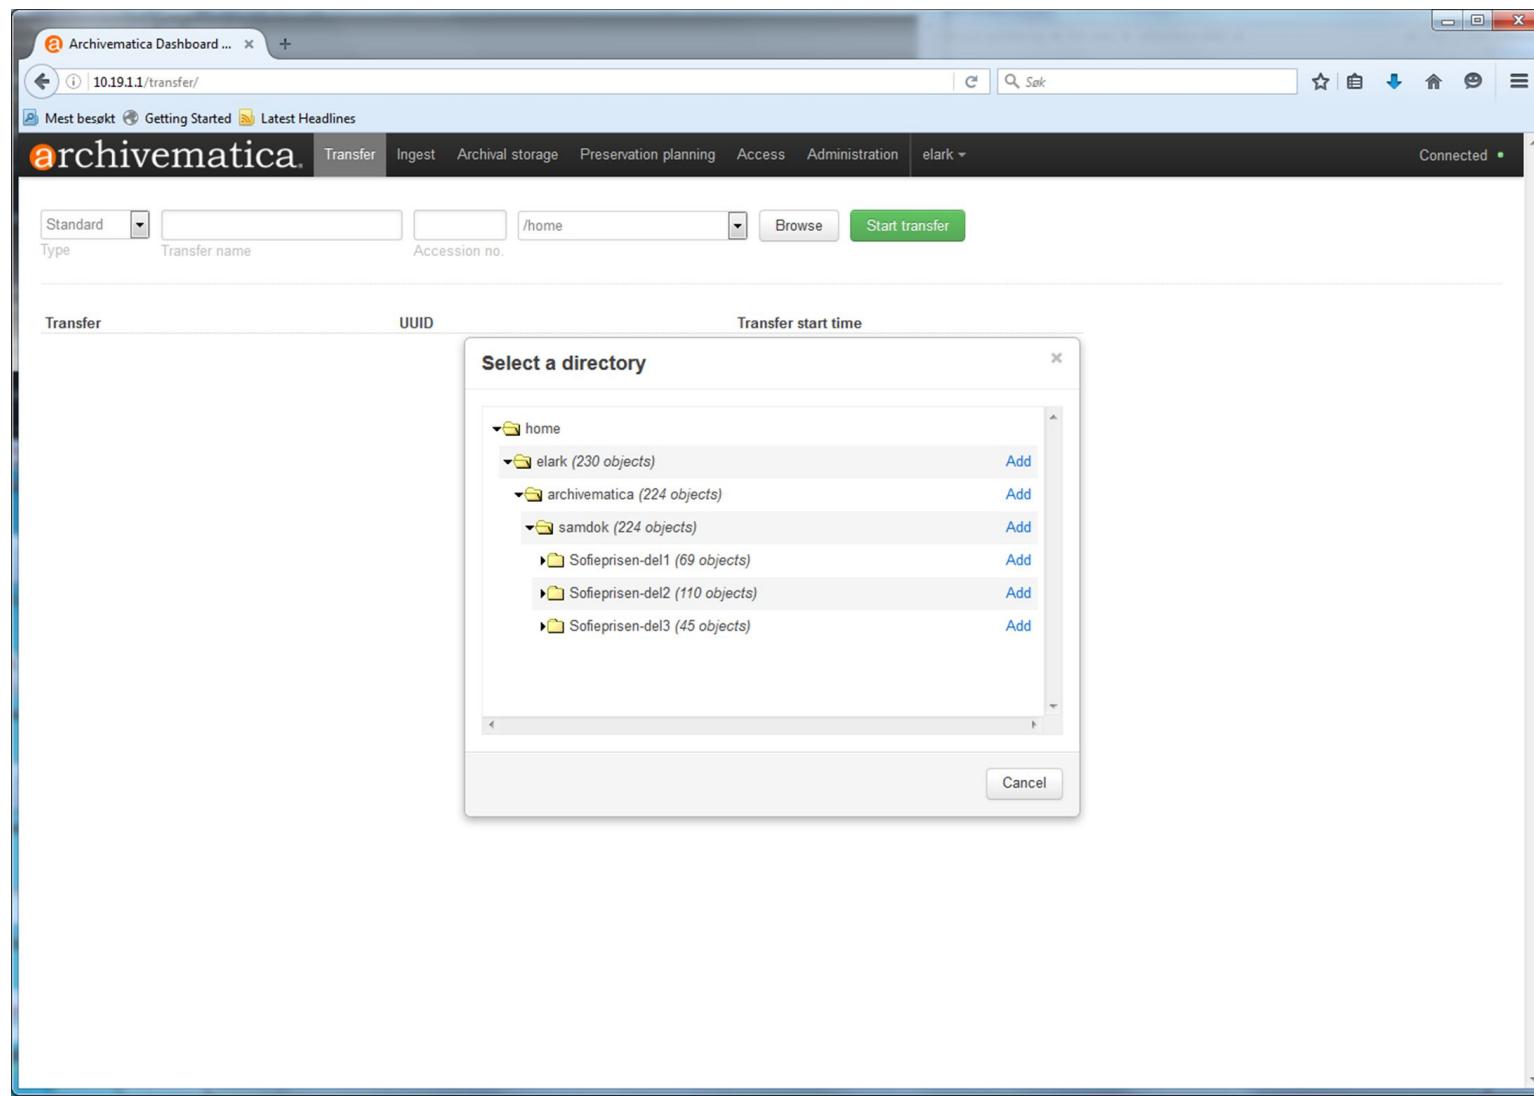

Prosjektet (SAMDOK, Privat)

- Oppgave PRIV 10_Metodikk for høsting og langtidslagring av privatarkiv
- **Ellen Røsjø (leder) (Riksarkivet)** – ellros@arkivverket.no
- Arne Kristian Groven, RA (*Riksarkivet / fagressurs*) – arngro@arkivverket.no
- Martin Ellingsrud (*Arbark*) – Martin.Ellingsrud@arbark.no
- Pål Mjørlund (*Fylkesarkivet i Oppland i samarb. m OPAM*) – pal.mjorlund@oppland.org
- Stig Brunstad (*Bergen byarkiv*) – Stig.Brunstad@bergen.kommune.no
- Torkel Thime (*Statsarkivet i Stavanger/NOGA Norsk olje- og gassarkiv*) – toth@arkivverket.no
- Per Kristian Ottersland (*Riksarkivet*) – peot@arkivverket.no
- Rolf Petter Waage (*Stokke AS / referanseressurs*) – waage@stokke.com

Erfaringer knyttet til bruk av Archivematica

- Verktøyet har lav brukterskel
- Det er relativt enkelt å bruke, og grad av automatisering kan lett justeres
- Noen eksempler/skjermdump følger...

Digitalt innhold som skal bearbeides hentes fra spesifiserte mapper...

Materialet som skal overføres gis et navn

The screenshot shows the Archivematica Dashboard interface. At the top, there is a navigation bar with links for 'Archivematica Dashboard ...', 'Transfer' (which is active), 'Ingest', 'Archival storage', 'Preservation planning', 'Access', 'Administration', and a user account 'elark'. Below the navigation bar, there is a search bar with the placeholder 'Søk' and a magnifying glass icon. The main content area is titled 'archivematica.' and shows a form for starting a transfer. The 'Type' dropdown is set to 'Standard'. The 'Transfer name' field contains 'test 1 Sofieprisen'. The 'Accession no.' field contains '/home'. There is a 'Browse' button and a green 'Start transfer' button. Below this form, there is a table header with columns 'Transfer', 'UUID', and 'Transfer start time'. The rest of the table body is currently empty.

Dublin Core (DC) metadata fylles ut

The screenshot shows the Archivematica Dashboard with the "Dublin Core Metadata Editor" tab selected. The URL in the browser is 10.19.1.1/transfer/1b156366-3638-4ef8-8d88-96eccf0cb049/metadata/add/. The main content area displays a form for adding Dublin Core metadata to a file named "test 1 Sofieprisen".

Dokumentasjon av DC er lett tilgjengelig

The screenshot shows a Windows application window titled "Archivematica Dashboard -". The main content area displays the "Dublin Core Metadata Ele..." tab. The page lists various Dublin Core terms with their definitions, URIs, and other details. The terms listed are:

- Term Name: creator**
 - URI: <http://purl.org/dc/elements/1.1/creator>
 - Label: Creator
 - Definition: An entity primarily responsible for making the resource.
 - Comment: Examples of a Creator include a person, an organization, or a service. Typically, the name of a Creator should be used to indicate the entity.
- Term Name: date**
 - URI: <http://purl.org/dc/elements/1.1/date>
 - Label: Date
 - Definition: A point or period of time associated with an event in the lifecycle of the resource.
 - Comment: Date may be used to express temporal information at any level of granularity. Recommended best practice is to use an encoding scheme, such as the W3CDTF profile of ISO 8601 [W3CDTF].
 - References: [W3CDTF] <http://www.w3.org/TR/NOTE-datetime>
- Term Name: description**
 - URI: <http://purl.org/dc/elements/1.1/description>
 - Label: Description
 - Definition: An account of the resource.
 - Comment: Description may include but is not limited to: an abstract, a table of contents, a graphical representation, or a free-text account of the resource.
- Term Name: format**
 - URI: <http://purl.org/dc/elements/1.1/format>
 - Label: Format
 - Definition: The file format, physical medium, or dimensions of the resource.
 - Comment: Examples of dimensions include size and duration. Recommended best practice is to use a controlled vocabulary such as the list of Internet Media Types [MIME].
 - References: [MIME] <http://www.iana.org/assignments/media-types/>
- Term Name: identifier**
 - URI: <http://purl.org/dc/elements/1.1/identifier>
 - Label: Identifier
 - Definition: An unambiguous reference to the resource within a given context.
 - Comment: Recommended best practice is to identify the resource by means of a string conforming to a formal identification system.
- Term Name: language**

Så utføres en lang rekke MCP-er og beslutningspunkter krever interaksjon

The screenshot shows the Archivematica Dashboard interface. At the top, there are tabs for 'Archivematica Dashboard' and 'Dublin Core Metadata Ele...'. Below the tabs is a navigation bar with links for 'Mest besøkt', 'Getting Started', 'Latest Headlines', and user information ('elark'). The main area is titled 'archivematica.' and shows a 'Transfer' section with a red notification badge '1'. The transfer details are as follows:

Type	Transfer name	Accession no.	Start transfer
Standard		/home	

Below this, a table lists the transfer steps:

Transfer	UUID	Transfer start time
test 1 Sofieprisen	1b156366-3638-4ef8-8d88-96eccf0cb049	2016-06-03 14:21
► Micro-service: Identify file format		
Job: Select file format identification command		Awaiting decision
Job: Move to select file ID tool		Completed successfully
► Micro-service: Clean up names		
► Micro-service: Generate transfer structure report		
► Micro-service: Scan for viruses		
► Micro-service: Quarantine		
► Micro-service: Generate METS.xml document		
► Micro-service: Verify transfer checksums		
► Micro-service: Reformat metadata files		
► Micro-service: Assign file UUIDs and checksums		
► Micro-service: Include default Transfer processingMCP.xml		
► Micro-service: Verify transfer compliance		
► Micro-service: Rename with transfer UUID		
► Micro-service: Approve transfer		
Job: Approve standard transfer		Completed successfully

SIP-er genereres..

The screenshot shows the Archivematica Dashboard interface. At the top, there are tabs for 'Archivematica Dashboard ...' and 'Dublin Core Metadata Ele...'. The main title bar says '10.19.1.1/transfer/'. Below the title bar, there's a navigation menu with links for 'Mest besøkt', 'Getting Started', 'Latest Headlines', 'archivematica' (highlighted in orange), 'Transfer', 'Ingest' (with a red notification badge), 'Archival storage', 'Preservation planning', 'Access', 'Administration', and 'elark'. A dropdown menu shows 'Connected'.

The main content area has a form for starting a transfer:

Type: Standard	Transfer name: []	Accession no.: []	/home	Browse	Start transfer
----------------	--------------------	--------------------	-------	--------	----------------

Below the form is a table titled 'Transfer' showing the progress of a transfer named 'test 1 Sofieprisen' with UUID '1b156366-3638-4ef8-8d88-96eccf0cb049'. The table has columns for 'Transfer', 'UUID', and 'Transfer start time'. The status for all jobs is 'Completed successfully' with a green gear icon.

Transfer	UUID	Transfer start time
test 1 Sofieprisen	1b156366-3638-4ef8-8d88-96eccf0cb049	2016-06-03 14:21
▶ Micro-service: Create SIP from Transfer		
Job: Check transfer directory for objects	Completed successfully	green gear
Job: Move to SIP creation directory for completed transfers	Completed successfully	green gear
Job: Create SIP from transfer objects	Completed successfully	green gear
Job: Serialize Dublin Core metadata to disk	Completed successfully	green gear
Job: Move to processing directory	Completed successfully	green gear
Job: Create SIP(s) [?]	Completed successfully	green gear
Job: Load options to create SIPs	Completed successfully	green gear
Job: Check transfer directory for objects	Completed successfully	green gear
▶ Micro-service: Complete transfer		
▶ Micro-service: Examine contents		
▶ Micro-service: Validation		
▶ Micro-service: Characterize and extract metadata		
▶ Micro-service: Update METS.xml document		
▶ Micro-service: Extract packages		
▶ Micro-service: Identify file format		
Job: Identify file format	Completed successfully	green gear
Job: Determine which files to identify	Completed successfully	green gear
Job: Select file format identification command	Completed successfully	green gear
Job: Move to select file ID tool	Completed successfully	green gear
▶ Micro-service: Clean up names		
▶ Micro-service: Generate transfer structure report		
▶ Micro-service: Scan for viruses		
▶ Micro-service: Quarantine		
▶ Micro-service: Generate METS.xml document		
▶ Micro-service: Verify transfer checksums		
▶ Micro-service: Reformat metadata files		
▶ Micro-service: Assign file UUIDs and checksums		
▶ Micro-service: Include default Transfer processingMCP.xml		
▶ Micro-service: Verify transfer compliance		
▶ Micro-service: Rename with transfer UUID		
▶ Micro-service: Annotate transfer		

AIP/DIP-er genereres, automatisert konvertering til lagrings-/visningsformater

The screenshot shows the Archivematica Dashboard interface with the Ingest tab selected. There are three submission information packages (SIPs) listed:

- test_3_Sofieprisen**:
 - UUID: 01f32c1e-3f8b-4faa-9f79-d4df1fbc8888
 - Ingest start time: 2016-06-03 15:01
 - Status: Awaiting decision
 - Actions: - Normalize for preservation and access
 - Job status: Job: Normalize [?]
 - Job details:
 - Job: Resume after normalization file identification tool selected.
 - Job: Identify file format
 - Job: Select pre-normalize file format identification command
 - Job: Move to select file ID tool
 - Job: Grant normalization options for no pre-existing DIP
 - Job: Set remove preservation and access normalized files to renormalize link.
 - Job: Check for Access directory
 - Job: Identify manually normalized files
 - Job: Check for Service directory
 - Micro-service: Clean up names
 - Micro-service: Remove cache files
 - Micro-service: Include default SIP processingMCP.xml
 - Micro-service: Rename SIP directory with SIP UUID
 - Micro-service: Verify transfer compliance
 - Micro-service: Verify SIP compliance
- test2-Sofieprisen**:
 - UUID: b84c475f-51ce-405c-a86a-e856f99d4fee
 - Ingest start time: 2016-06-03 14:52
 - Status: Completed successfully
 - Actions: None
 - Job status: Job: Normalize [?]
 - Job details:
 - Job: Normalize for preservation and access
 - Job: Normalize for access
 - Job: Reject SIP
 - Job: Normalize service files for access
 - Job: Do not normalize
 - Job: Normalize manually
 - Job: Normalize for access
- test_1_Sofieprisen**:
 - UUID: 4b8121c2-2e32-4323-a029-452001ba1d02
 - Ingest start time: 2016-06-03 14:41
 - Status: Awaiting decision
 - Actions: None
 - Job status: Job: Store AIP (review) [?]
 - Job details:
 - Job: Move to the store AIP approval directory
 - Micro-service: Prepare AIP
 - Micro-service: Upload DIP
 - Job: Upload DIP
 - Micro-service: Prepare DIP
 - Micro-service: Generate AIP METS
 - Micro-service: Verify checksums

Review av resultatene før endelig godkjenning...

The screenshot shows the Archivematica Dashboard interface. The top navigation bar has tabs for 'Archivematica Dashboard' (selected), 'Dublin Core Metadata Ele...', and 'Dublin Core Metadata Ele...'. Below the navigation bar, the URL is 10.19.1.1/ingest/preview/normalization/6dd503c7-28cc-41c4-96fd-e87b3a8c8bdf/. The main menu includes 'Mest besøkt', 'Getting Started', 'Latest Headlines', and the 'archivematica.' logo. The top navigation bar also includes 'Transfer', 'Ingest' (with a red notification badge '3'), 'Archival storage', 'Preservation planning', 'Access', 'Administration', and a user dropdown for 'elark'.

The central area is titled 'Review normalization' and shows the path 'Ingest / test_1_Sofieprisen'. A tree view displays the normalized directory structure:

Erfaringer knyttet til bruk av Archivematica

- Det meste kan skje uten særlig brukerkompetanse
- Men ettersom så mye skjer under pansret så bør brukeren sette seg inn i hva som skjer, for å kunne utnytte verktøyet optimalt
- Dette er veldokumentert
- I tillegg bør brukeren ha forkunnskap om DC, OAIS, METS og PREMIS

Dokumentasjon om arbeidflyt (og mye annet) kan finnes på web-/wiki-sidene

The screenshot shows a web browser window with a yellow header bar. The address bar displays the URL https://wiki.archivematica.org/Requirements_Analysis#ingest. The main content area is a list of OAIS Use Cases:

- UC-1 Ingest
- UC-2 Archival Storage
- UC-3 Data Management
- UC-4 Administration
- UC-5 Preservation Planning
- UC-6 Access
- UC-Template
- See [Use Case Methodology](#) for details on how the use cases are structured.
- See [Glossary](#) for definitions of terms used in the use cases.

OAIS (UML) Activity Diagrams [edit]

These diagrams are an interpretation of the OAIS Use Cases to the UML Activity Diagram format. They focus on the practical steps required to accomplish each use case. Where possible, the activity references the use case number from which it is derived.

Each activity is likely to generate some metadata and have one or more information entities as an input and output. However, these will be captured in a separate metadata requirement analysis and information model. Likewise, each activity may be governed or restricted by one or more policy or procedures but these are also intentionally left out of the diagram for clarity. Except where they are explicitly noted, these diagrams assume that there are no errors in the activity flow, i.e. these are 'sunny-day' scenarios.

Tillit til programvare

- Negativ risiko forbundet med (innkjøp og bruk av) programvare, fri eller lukket, er stor dersom:
 - Få har kompetanse til å modifisere programvaren
 - Få bruker programvaren
- Dessuten, dersom dataene må gjennom mange transformasjoner:
 - Så vil lukkede løsninger forhindre kvalitetssikring, og øke negativ risiko
 - Fri og åpne løsninger vil redusere denne risikoen og øke etterprøvbarhet
- Dette er hovedgrunnen til at mange velger fri programvare/åpen kildekode for langtidsbevaring og aksess

Prosjektets kontakt med leverandør (Artifactual Systems)

- Vi har (generelt) i prosjektet ikke hatt mye kontakt med leverandøren
- Med et unntak, ARBARK- Arbeiderbevegelsens arkiv og bibliotek
- ARBARK leide tjenester i skyen av Artifactual Systems, fra servere som sto i Tyskland
- Erfaringene med dette var stort sett positive, så vidt jeg forstår.
- Ellers har vi diskutert norsk skyproblematikk med leverandøren
- Og de svarte uoppfordret at de sikkert kunne tilby skytjenester fra servere i Norge, dersom det var nødvendig

Vi som ikke leide tjenester i skyen...

- Stolte på vår egen evne til å installere og driftet Archivematica og Atom... (det var jo også et formål med prosjektet, å teste ut teknologi)
- Vi fant ut etter hvert at vi behøvde kursing i Linux server-administrasjon, med fokus på installasjon av programvare, noe vi fikk hos Redpill-Linpro
- Da kunne installasjon av Archivematica og AtoM gjennomføres i løpet av en dag eller to

Noen ord om installasjonen

INSTALLING ARCHIVEMATICA 1.4 PACKAGES (NEW INSTALL)

Archivematica packages are hosted on Launchpad, in an Ubuntu PPA (Personal Package Archive). In order to install software onto your Ubuntu system from a PPA:

1. Add the archivematica/release PPA to your list of trusted repositories (if add-apt-repositories is not available you must install python-software-properties first):

```
sudo apt-get update  
sudo apt-get install python-software-properties  
sudo add-apt-repository ppa:archivematica/1.4
```

2. Add the ElasticSearch apt repository next:

```
sudo wget -O - http://packages.elasticsearch.org/GPG-KEY-elasticsearch | sudo apt-key add -  
sudo sh -c 'echo "deb http://packages.elasticsearch.org/elasticsearch/1.4/debian stable main"' >
```

3. Update your system to the most recent 12.04 release (12.04.5 at the time of this writing).

This step will also fetch a list of the software from the PPAs you just added to your system.

```
sudo apt-get update  
sudo apt-get upgrade
```

4. Install the storage service package

```
sudo apt-get install archivematica-storage-service
```

5. Configure the storage service

```
sudo rm -f /etc/nginx/sites-enabled/default  
sudo ln -s /etc/nginx/sites-available/storage /etc/nginx/sites-enabled/storage  
sudo ln -s /etc/uwsgi/apps-available/storage.ini /etc/uwsgi/apps-enabled/storage.ini  
sudo service uwsgi restart  
sudo service nginx restart
```

6. Install the Archivematica packages (each of these packages can be installed separately, if necessary). Say YES or OK to any prompts you get after entering the following into terminal:

```
sudo apt-get install archivematica-mcp-server  
sudo apt-get install archivematica-mcp-client  
sudo apt-get install archivematica-dashboard
```

- Det er veldig dokumenterte oppskrifter som beskriver Archivematica server-installasjon, og AtoM server-installasjon
- Vi slet litt med å konfigurere koblingen mellom de. Her var dokumentasjonen litt mangefull

Noen avsluttende ord...

- Jeg skulle gjerne sagt noe om AtoM (Access to Memory), aksess og «content management» modulen som er «bundlet» med Archivematica, men det får bli en annen gang...
- Samdok-prosjektet vårt skal etter planen levere en avsluttende rapport innen (ca.) 1. september.
- Riksarkivet planlegger også å evaluere Archivematica opp mot et annet tilsvarende verktøy som heter Preservica. Dette vil skje i et prosjekt kalt DIAS 2.

Noen avsluttende ord

- Archivematica har en fleksibilitet som muliggjør mange ulike konfigurasjoner og oppsett langs verdikjeden fra arkivskaper til depot
- Archivematica effektiviserer bearbeiding av digitalt arkivmateriale, slik at en kan regne minutter og timer, framfor dager og uker
- Og tilliten til prosessene ligger dokumentert i systemet på standardiserte formater
